

ARM365 Pricing

HUD ARM compliance built on Microsoft Power Platform

Item	Cost	Description
ARM365 - Core Solution	\$3,000	Only HUD ARM ICD required functionality and fields. Includes installation into newly acquired Power Platform instances. If the center has an existing instance, analysis will need to be done to determine the level of effort for implementing the ARM365 solution. *Housing centers are responsible for getting their credentials for the HUD ARM Service and CMS systems, and providing those to Messor Solutions so their solution can be properly configured. An important reminder, per HUD, centers who sign up to use our solution do not need to be 're-certified' with HUD. They will receive their own accounts with HUD, but they will already be certified and ready to go because they are using ARM365!
ARM365 Customer Intake Portal	\$3,000	An online intake portal that lets your customers submit their information directly into your ARM365 solution, reducing manual data entry for center staff. Includes installation and configuration for your existing ARM365 instance.
General Consulting (e.g. additional configurations, functionality)	\$100 per hr.	Additional configurations, functionality, and post-implementation support. Ongoing support after implementation is billed at this hourly rate.
Data Migration (inc Data Mapping Analysis)	\$1,000	Data migration is often at the core of our installation and configuration processes. We understand centers often have data all over the place, and we work together to make it as painless as possible. The only way we know to do this is by analyzing the data and providing an estimate. Messor Solutions will provide a list of the HUD required fields ahead of implementation time, giving centers time to use their own resources to start mapping data fields.

Pricing effective August 2026 and subject to change.
